

MUNRO GLOBAL GROWTH FUND

ABSOLUTE RETURNS

DECEMBER 2019 QUARTERLY UPDATE

QUARTERLY HIGHLIGHTS

- Munro Global Growth Fund delivered strong performance for the December quarter, +5.0%, driven by buoyant equity markets but somewhat offset by a strengthening AUD.
- Net equity exposure was increased to over 90% to allow the Fund to benefit from the positive market backdrop. Performance was driven by Alibaba post its Hong Kong listing and High Performance Computing names in ASML and TSMC (page 3).
- Looking ahead we expect a strong start to the year for equity markets as growth re-accelerates and central banks are likely to keep interest rates low. As the year progresses, the US Presidential election in November looks to be the most obvious source of market volatility (page 2).

2020 MARKET OUTLOOK VIDEO

In this six minute video, Munro Partners' Chief Investment Officer, Nick Griffin, shares his thoughts on the following:

1. The year that was 2019
2. Market outlook 2020
3. Two new Areas of Interest
 - High Performance Computing
 - Climate

MUNRO GLOBAL GROWTH FUND

ABSOLUTE RETURNS

DECEMBER 2019 QUARTERLY UPDATE

FUND COMMENTARY

Equity markets globally were higher over the quarter as the US-China Phase One trade deal was finally agreed and the UK election resulted in a resounding win to Boris Johnson's Conservative Party. Furthermore, the US Federal Reserve essentially gave a green light to add risk by telegraphing that it would allow inflation to run ahead of target before reversing its recent 'insurance cuts'.

Net market exposure was increased over the quarter to above 90% to allow the Fund to benefit from the positive backdrop. Exposure was lifted in several the Fund's key structural growth stocks which were initially left behind in the rally as the market first reached for lower valuation cyclical companies that are considered the larger direct beneficiaries of a macro improvement.

From a stock attribution perspective, positive contributions came from Alibaba and Microsoft, while High Performance Computing names ASML and TSMC were also strong. The largest detractors to performance were Boeing which continued to struggle post the 737 MAX grounding and has now been exited. Short positions in Takeaway.com and Harley-Davidson also detracted from overall performance.

On currencies, the Fund held roughly 50/50 in AUD/USD over the quarter, the weakening USD versus most currencies meant the Fund derived a 245bps loss from foreign currency compared to the MSCI index AUD's 320bps loss over the quarter.

MARKET OUTLOOK

2020 VISION

MUNRO PARTNERS MARKET OUTLOOK VIDEO

Looking back at 2019, the lesson for all investors is that interest rates matter. Despite weak growth, weak earnings and an ongoing trade war between the world's two major superpowers, equities managed to deliver a stellar year as the 'Powell Pivot' in early January underwrote equity market valuations. With a US / China 'Phase One' trade deal now inked, the US Federal Reserve is hoping to keep rates on hold for the entirety of 2020 and should that happen, we would expect another positive year ahead for equity markets.

Why? Because interest rates are extremely low. Low rates give investors very little opportunity to earn a return in safe asset classes, so we expect equity markets to be favoured through 2020 as investors look to improve overall portfolio returns. Central Banks looking to stimulate growth are likely to encourage this behaviour as a way of simulating wealth creation and hence economic activity. With inflation still too low, this could even leave room for central banks to target an 'inflation overshoot' as justification for low interest rate settings prolonging longer than what would normally be expected. Consequently, we see the first half of 2020 at least being a very benign environment for equity markets.

The major near-term risk to this outlook is economic growth and consequently earnings not recovering into 2020 as many now expect. Considering the recent trade deal and low nature of inventories globally we see this as unlikely, but this remains a near term possibility. As the year progresses, issues such as the return of inflation, 'Trade Wars' and eventually the US election will undoubtedly appear as a source of volatility. Of these, the US presidential election looks like the big one and the noise levels will begin to rise with the Democratic primaries running March through to July. Should Warren or Sanders prevail, this would create a large overhang for markets. Biden or Bloomberg versus Trump would be of significantly less concern for investors.

MUNRO GLOBAL GROWTH FUND

ABSOLUTE RETURNS

DECEMBER 2019 QUARTERLY UPDATE

STOCK STORY - ALIBABA

AREA OF INTEREST:

E-COMMERCE

MARKET CAP:

US\$580B

Alibaba contributed 99bps (combined US & Hong Kong listings) to performance over the December quarter.

Alibaba has been a core holding in the fund for nearly two years. However, despite delivering revenue and earnings growth of 100% and 300% respectively over the last two years, its share price has remained stubbornly static, as its multiple compressed to take account of a range of issues. The most obvious have been the trade dispute between the US and China, concerns around its Variable Interest Entity (VIE) ownership structure and the exit of Yahoo as a large original shareholder.

In November, after several false starts, Alibaba finally listed on the Hong Kong stock exchange. We see this as a strong catalyst for the stock as ultimately, via stock connect arrangements with Shanghai, this will allow domestic Chinese nationals to own a piece of their Chinese National Champion.

In short, we view Alibaba as being like the Amazon of China; dominating the dual growth areas of E-Commerce and Cloud Computing.

Alibaba also has the tailwinds of a larger Gross Merchandise Value (GMV) market and being earlier in its penetration and profitability, particularly on the cloud side of the business. The Hong Kong listing simply removes much of the overhang that was depressing the stock's valuation.

During the quarter, the Fund took the opportunity of the new primary listing to double its holding in the company and is now in our top 5 holdings. We anticipate the valuation gap of Alibaba to peers continuing to close over the months ahead as stock connect arrangements with Shanghai are formalised.

STOCK STORY - TSMC

AREA OF INTEREST: HIGH PERFORMANCE COMPUTE

MARKET CAP:

US\$285B

Taiwan Semiconductor Manufacturing Corporation (TSMC) added 74 bps to performance in the December quarter. In previous monthly reports we have discussed the role of ASML and its EUV technology in helping extend Moore's Law and enabling shrink beyond the 10-nanometre node.

As the world's biggest semiconductor foundry, TSMC is the chief beneficiary of this new technology and hence is the 2nd key pillar in our High Performance Computing Area of Interest.

The cost of adopting EUV technology is prohibitively high for most semiconductor foundries and consequently, TSMC has extended its technology lead over its main competitors (e.g. Samsung, Intel and Global Foundries) by aggressively adopting the technology.

This has allowed them to attract more leading-edge business from fabless chip makers such as AMD, Nvidia and the Chinese players. These chip makers crave the leading-edge solutions as it allows them to sell into the global arms race that is occurring to adopt Artificial Intelligence, 5G and autonomous driving. This in turn facilitates an increasing share of the semiconductor market to TSMC, while also allowing them to earn higher margins as competition is reduced at the leading-edge nodes.

Finally, being Taiwan based, TSMC appears to be increasingly playing the role of Switzerland as the chief weapons manufacturer in the technology arms race that is occurring between China and the US. We see all these dynamics contributing to 20% EPS CAGR over the next 3 years; with the stock trading at 20 times forward earnings with a 4% dividend yield, and little in the way of competition on the horizon, this still looks underappreciated.
